### Hi-Tech from Saxony is introduced in the Chinese city Chongqing

The 12th China Chongqing Hi-Tech Fair opens its doors on April 21. A German delegation (one of 14 international delegations) will attend the exhibition in the megacity on the shore of the Jangtse River. The research institutes and companies of the German delegation are from Saxony predominantly. In China, they exhibit high-tech solutions e.g. smart systems for condition monitoring of industrial equipment, environmental monitoring as well as automation technologies. The head of the German delegation is Prof. Dr. Thomas Gessner, director of the Fraunhofer ENAS in Chemnitz and the Center for Microtechnologies at TU Chemnitz.

The Saxon companies SAW Components Dresden GmbH, TQ Systems GmbH Chemnitz, Vita 34 AG, Bergmann AG as well as the Center for Microtechnologies at TU Chemnitz and the Fraunhofer Institute for Electronic Nano Systems ENAS belong to the exhibitors of the German joint booth.

Fraunhofer ENAS shows a portable grating spectrometer based on a vibrating MEMS component. The institute has developed the spectrometer together with TQ Systems GmbH Chemnitz and the Center for Microtechnologies. This small near infrared spectrometer can measure the transmission as well as the absorption spectrum of liquids in 4 milliseconds. Analysis of liquids such as wastewater can be done based on these spectra.

During the China Chongqing Hi-Tech Fair, Prof. Geßner will meet the deputy mayor and representatives of the city of Chongqing as well as the director of the Chongqing Science & Technology Commission for bilateral discussions.

The **Fraunhofer-Gesellschaft** is the leading organization for applied research in Europe. Its research activities are conducted by 67 Fraunhofer Institutes and research units at locations throughout Germany. The Fraunhofer-Gesellschaft employs a staff of 24,000, who work with an annual research budget totaling more than 2.1 billion euros. Of this sum, more than 1.8 billion euros is generated through contract research. More than 70 percent of the Fraunhofer-Gesellschaft's contract research revenue is derived from contracts with industry and from publicly financed research projects. Branches in the Americas and Asia serve to promote international cooperation.
